

Lips and Eyebrows:

Mix a small amount of salt with a small amount of warm water.

Dip a cotton swab into the salty water and rub over the treated area 2 to 3 times a day for the first 2 days following your procedure. It may sting a bit. In between, keep area dry.

For the duration of the week, keep this area dry and allow it to scab and heal. Color should fade once the treated area heals.

Avoid day and night creams or any type of moisturizers.

The area may remain pink or red for the next couple of weeks. This is normal. Multiple sessions may be required.

Eyeliner:

Allow this area to heal completely dry. No at home treatment is necessary since salt may get into the eyes.
